# Act I – The Fundamentals

# What is Spatial Data?

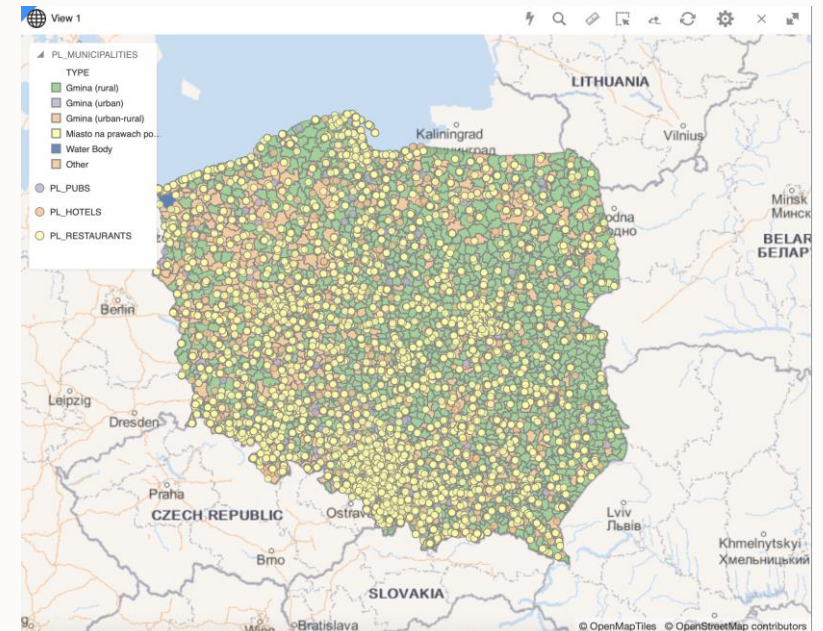

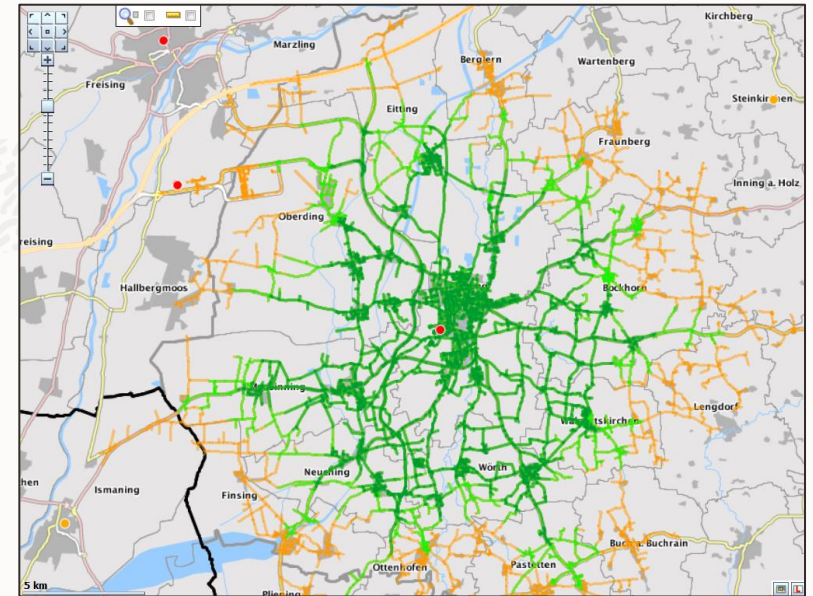

Business data that contains or describes **location**

- Geographic features (roads, rivers, parks, etc.)
- Assets (cell tower, fire hydrant, electrical transformer, etc.)
- Sales data (sales territory, customer registration, etc.)
- Street and postal address (customers, stores, factory, etc.)

Anything connected to a physical location

Almost every database contains some form of business data that can be leveraged using spatial technologies

Just like time, location is a “**universal key**”

# Spatial Data and Databases: Types and Functions

Extending a database to handle new data requires ...

- ✓ A **data type** to store it
- ✓ SQL **predicates** to query it
- ✓ Specific **indexes** to search it
- ✓ **Functions** to process it

**Object type**

**Operators**

**Domain Indexes**

**Stored Functions**

# Fundamental Queries on Spatial Data

**Return shapes having spatial relationships to another**

SDO\_RELATE

[More information](#)

- List all properties that are located in a flood zone ...
- Detect whenever a vehicle enters a restricted area ...
- How many customers live inside each of my sales districts ...

**Return shapes within a specified distance of another**

SDO\_WITHIN\_DISTANCE

[More information](#)

- Find all the pubs that are within 500m of my hotel ...
- Find land parcels that are within 100m of a river ...
- List all households that live further than 10km from any hospital ...

**Return shapes nearest to another**

SDO\_NN

[More information](#)

- Find the 3 nearest restaurants to my current GPS location ...
- For each customer, find the closest of our service centers to that customer ...

# Typical Applications using Geospatial Data

## Public sector

- Land use, infrastructure, planning, emergency services, reachability analysis, ...

## Utilities

- Network planning and operation, outage analytics plant safety, field service planning...

## Retail

- Location-based marketing, site planning, indoor customer flow analysis, ...

## Financial services

- Targeted marketing, risk zone analysis, ...

## Consumer

- Location-based services, friend finder, navigation guidance ...

... and many more

## Use Case: Outfront Media

Outfront Media – Outdoor media company managing >500K displays and billboards

Hurricane risk analysis solution

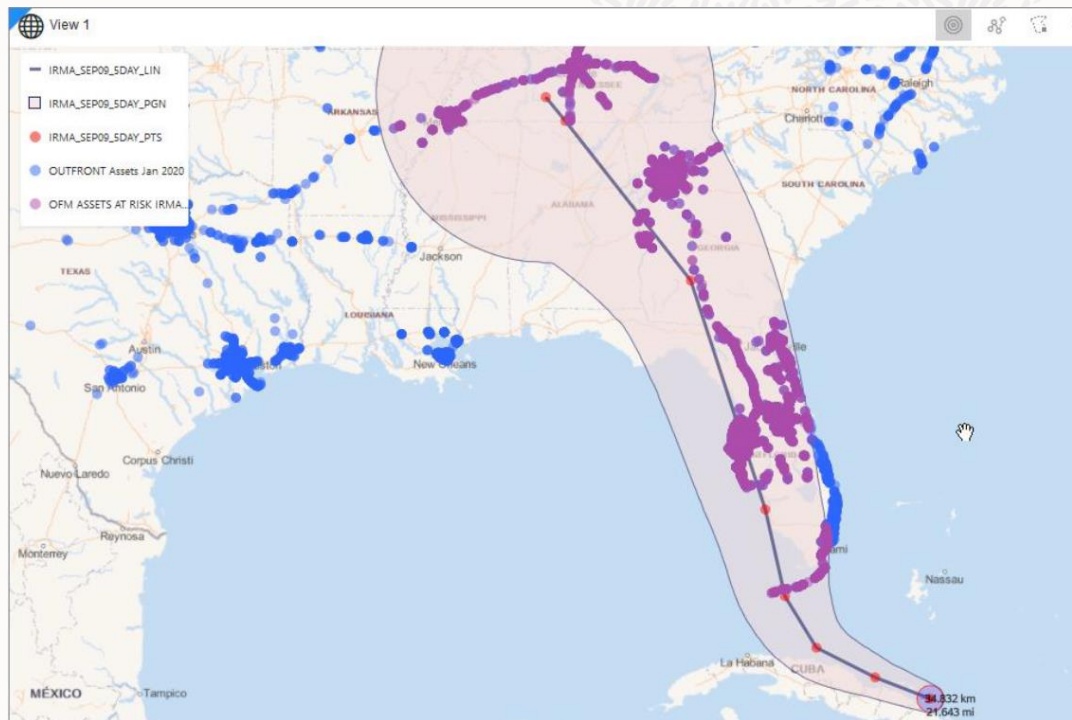

- Based on OAC and Spatial Studio
- Presented at Analytics and Data Summit

Business Case

- Minimize damage
- Prioritize by revenue and structure
- Minimize operational cost

Based on Hurricane forecasting data

- Data from NOAA
- In conjunction with asset location

## Use Case: Altistumiset.fi

Website for tracking Coronavirus cases in Finland

- Enabling individuals to actively check if they may have been exposed to Covid-19

Built by volunteers in 10 days

- Heli Helskyaho and team at Miracle Oy
- Oracle APEX and Oracle Spatial
- Visualization with Maps plug-ins
- Replaced solution using Excel sheets

Running on Autonomous Database

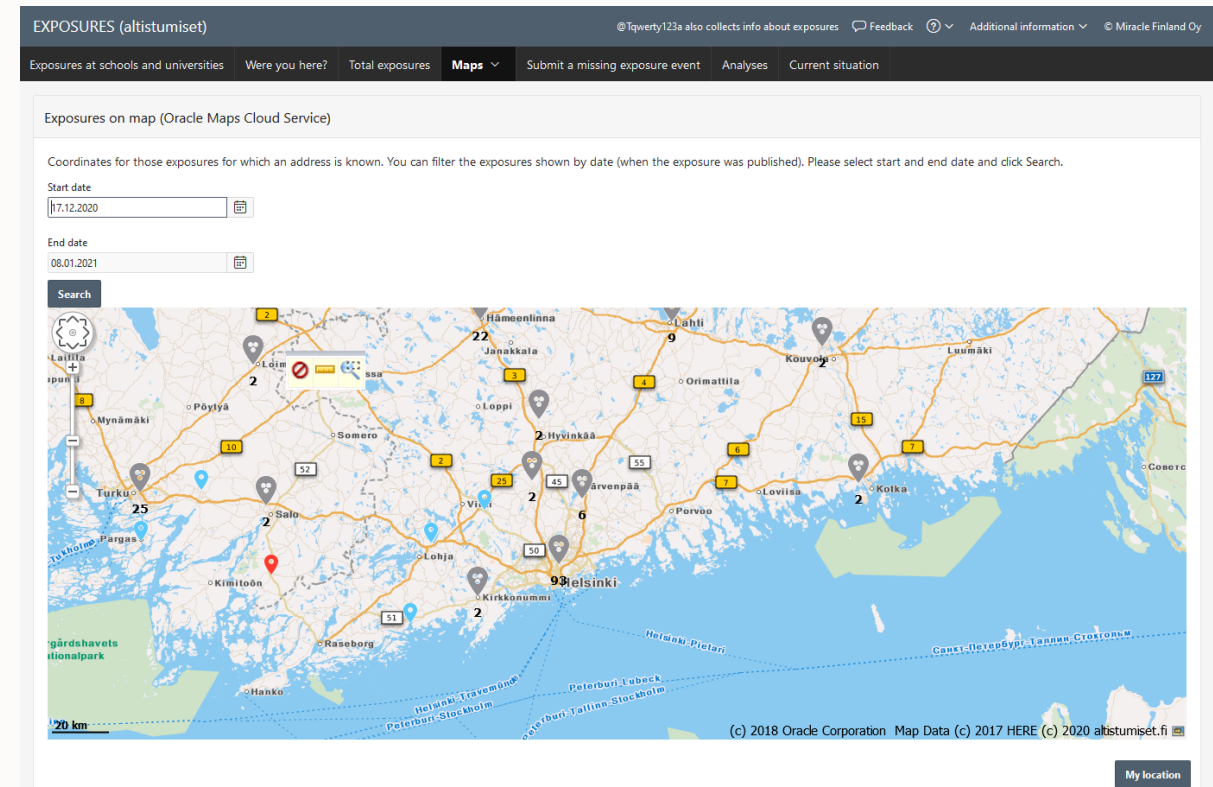

- Started on Free Tier

Extensive media coverage led to massive traffic

- 600000 visits/day (in a country of 5.5M inhabitants)

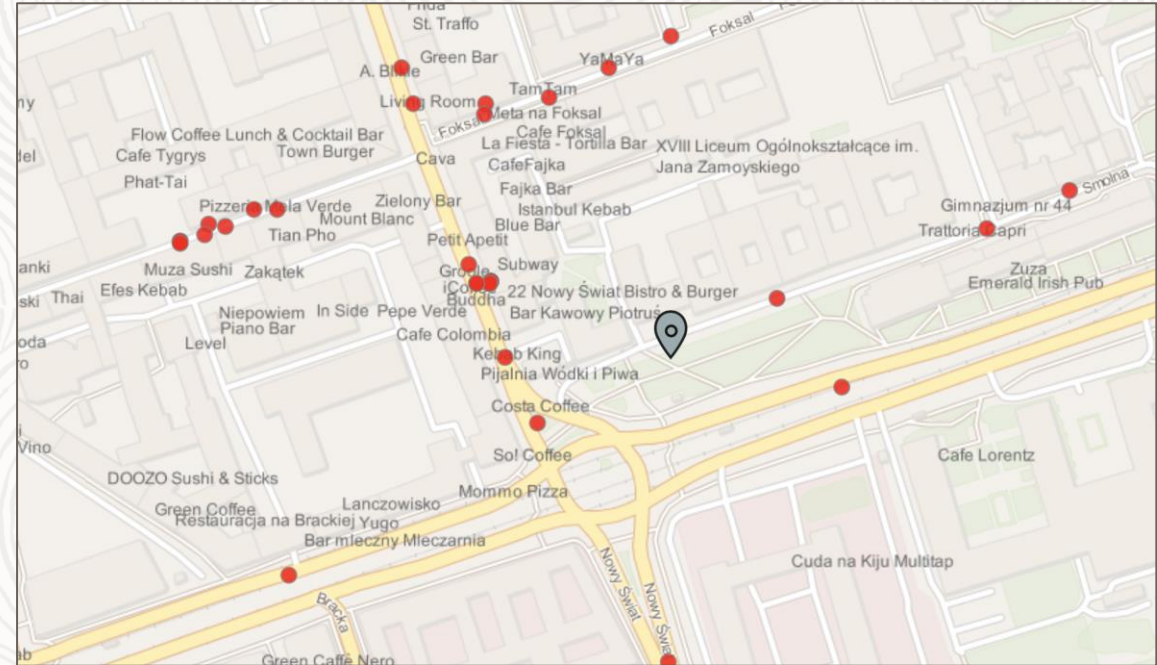

ā'pěks  
(#orclapex)

MIRACLE  
Miracle Finland Oy

# Act II – Click and Point

# The tool:

## Introducing Spatial Studio – Self Service Spatial Analytics

### Data ingestion and enrichment

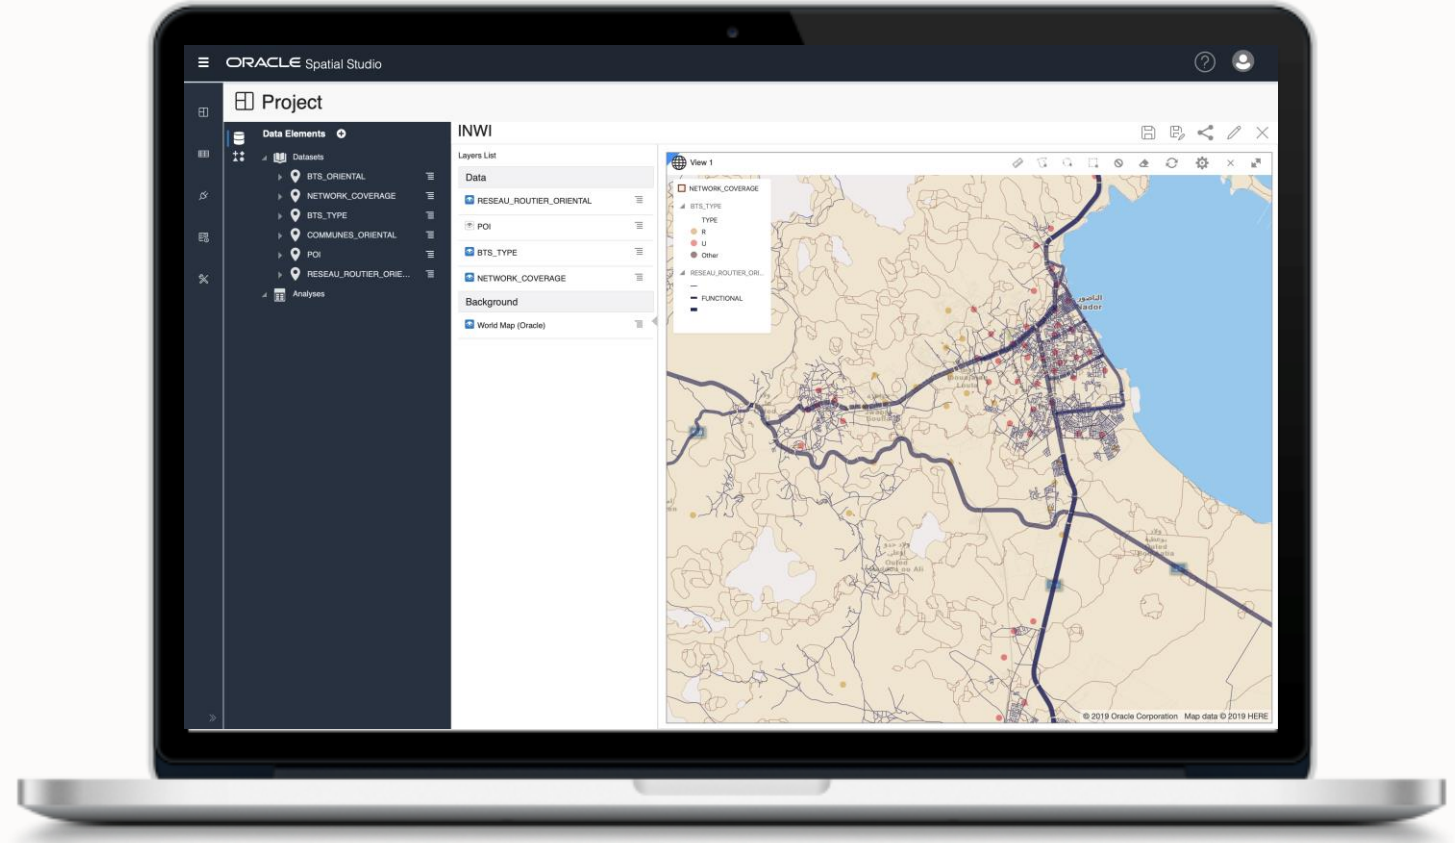

- Importing Spatial and non-spatial data
- Address geocoding
- Indexing

### Interactive analysis

- Map visualization

### Geospatial processing

- Creating analytical workflows

# Act III – Under the Hood

# Spatial Data and Databases: Types and Functions

Extending a database to handle new data requires ...

✓ A **data type** to store it

Object type

SDO\_GEOMETRY

✓ SQL **predicates** to query it

Operators

SDO\_INSIDE, SDO\_TOUCH ...

✓ Specific **indexes** to search it

Domain Indexes

RTREE

✓ **Functions** to process it

Stored Functions

BUFFER, AREA, UNION ...

# Fundamental Operations on Spatial Data

## Return shapes having spatial relationships to another

SDO\_RELATE

[More information](#)

```
SELECT v.vehicle_id, v.vehicle_position
FROM vehicles v, restricted_areas a
WHERE a.area_id = 51
AND SDO_INSIDE (v.vehicle_position, a.area_shape) = 'TRUE'
```

## Return shapes within a specified distance of another

SDO\_WITHIN\_DISTANCE

[More information](#)

```
SELECT p.pub_id, p.phone_nr
FROM pubs p, hotel h
WHERE h.hotel_name = 'Hotel Indigo'
AND SDO_WITHIN_DISTANCE (
    p.pub_location, h.hotel_location, 'distance=500 unit=m'
) = 'TRUE'
```

## Return shapes nearest to another

SDO\_NN

[More information](#)

```
SELECT r.restaurant_id, r.phone_nr
FROM restaurants r
WHERE SDO_NN (
    r.restaurant_location, :my_location, 'sdo_num_res=3'
) = 'TRUE'
```

# The SDO\_GEOMETRY Object

```
SQL> CREATE TABLE us_states (  
2     state      VARCHAR2(30),  
3     totpop    NUMBER(9),  
4     geom       SDO_GEOMETRY  
5 );
```

SDO_GTYPE	NUMBER
SDO_SRID	NUMBER
SDO_POINT	SDO_POINT_TYPE
SDO_ELEM_INFO	SDO_ELEM_INFO_ARRAY
SDO_ORDINATES	SDO_ORDINATE_ARRAY

# The SDO\_GEOMETRY Object

## SDO\_GTYPE:

A four-digit code that describes the type of the geometric object:

- Dimensionality: 2D, 3D, ...
- Type: point, line, polygon ...

## SDO\_SRID:

A code (number) that identifies the coordinate system of the geometric shape.

Code 4326 is the one for Longitude/Latitude (the GPS coordinates, aka WGS84)

## SDO\_POINT\_TYPE:

x	NUMBER
y	NUMBER
z	NUMBER

Used for simple point geometries

## SDO\_ELEM\_INFO\_ARRAY:

VARRAY (1048576) OF NUMBER
----------------------------

Describes the internal structure of the geometry.

## SDO\_ORDINATE\_ARRAY:

VARRAY (1048576) OF NUMBER
----------------------------

Contains all the coordinates of the geometry

## Creating Geometries

```
INSERT INTO us_cities (id, city, state_abrv, location )
VALUES (
    196,
    'Bismarck',
    'ND',
    SDO_GEOMETRY (
        2001, 4326,
        SDO_POINT_TYPE (-100.74869, 46.7666667, null),
        null, null
    )
);
```

## Indexing Geometries

```
CREATE INDEX us_cities_sx ON us_cities (location )
INDEXTYPE IS mdsys.spatial_index
```

# Multiple Data Encodings ...

Native SDO_GEOMETRY data type	<pre>SDO_GEOMETRY(2001, 4326, SDO_POINT_TYPE(-73.943849, 40.6698, NULL), NULL, NULL)</pre>
GeoJSON	<pre>{"type": "Point", "coordinates": [-73.943849,40.6698] }</pre>
GML	<pre>&lt;gml:Point srsName="EPSG:4326" xmlns:gml="http://www.opengis.net/gml"&gt; &lt;gml:coordinates decimal="." cs="," ts=" "&gt; -73.943849,40.6698&lt;/gml:coordinates&gt;&lt;/gml:Point&gt;</pre>
KML	<pre>&lt;Point&gt;&lt;extrude&gt;0&lt;/extrude&gt;&lt;tessellate&gt;0&lt;/tessellate&gt; &lt;altitudeMode&gt;relativeToGround&lt;/altitudeMode&gt;&lt;coordinates&gt; -73.943849,40.6698&lt;/coordinates&gt;&lt;/Point&gt;</pre>
WKT	<pre>POINT (-73.943849,40.6698)</pre>
WKB	<pre>0000000001C0527C6805A2D730404455BC01A36E2F</pre>

## Example of Spatial Query (SDO\_INSIDE)

Find all the parks fully contained **inside** the state of Wyoming

```
SELECT p.id, p.name
FROM us_parks p, us_states s
WHERE s.state = 'Wyoming'
AND SDO_INSIDE (
    p.geom, s.geom
) = 'TRUE';
```

## Example of Spatial Query (SDO\_OVERLAPS)

Find all the states the Yellowstone National Park lies on

...

```
SELECT s.id, s.state
FROM us_parks p, us_states s
WHERE p.name = 'Yellowstone NP'
AND SDO_OVERLAPS (
    s.geom, p.geom
) = 'TRUE';
```

## Example of Distance Query (SDO\_WITHIN\_DISTANCE)

Find all the cities within 100 miles of Boston, ordered by distance.

```
SELECT c1.city,  
       SDO_GEOM.SDO_DISTANCE (  
         c1.location, c2.location,  
         0.5, 'unit=mile') distance  
FROM us_cities c1, us_cities c2  
WHERE c2.city = 'Boston'  
      AND SDO_WITHIN_DISTANCE(  
         c1.location, c2.location,  
         'distance=100 unit=mile'  
      ) = 'TRUE'  
ORDER BY distance;
```

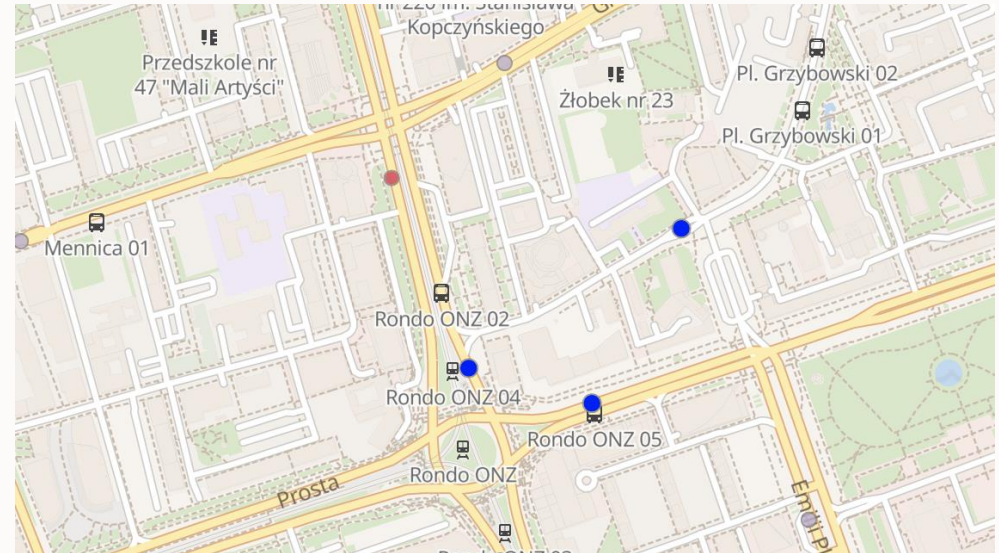

Boston	0
Lowell	26.039707
Worcester	40.7874355
Providence	41.0584302
Springfield	79.5090887
Hartford	94.303397

# Example of Proximity Query (SDO\_NN)

Find the **three closest** pubs to my hotel, ordered by distance.

```
SELECT p.pub_id, p.phone_nr,  
       SDO_GEOM.SDO_DISTANCE (  
         p.location, h.location)  
       as distance  
FROM   pubs p, hotels h  
WHERE  h.hotel_name = 'The Westin Warsaw'  
AND    SDO_NN (  
        p.pub_location, h.hotel_location, 'sdo_num_res=1'  
      ) = 'TRUE'  
ORDER BY distance;
```

PUB_ID	NAME	TELEPHONE_NUMBER	DISTANCE
1202735595	BROOKLYN	+(48)-221143434	194.518629
1176168302	KOSHER FALAFEL KOSZERNY FALAFEL	+(48)-531226385	279.446048
1212588903	PATERA COCTAIL & SUSHI BAR	+(48)-535333123	286.312078

# Many more kinds of Spatial Data ....

## Oracle's Spatial Database

Oracle's spatial database is included in Oracle's converged database, allowing developers and analysts to get started easily with location intelligence analytics and mapping services. It enables Geographic Information System (GIS) professionals to successfully deploy advanced geospatial applications. Organizations can manage different types of geospatial data, perform hundreds of spatial analytic operations, and use interactive map visualization tools with the spatial features in Oracle Autonomous Database and Oracle Database.

Oracle's location and spatial platform delivers enterprise scalability, security, and performance to power the most demanding applications in Oracle Cloud Infrastructure and on-premises.

Helping fight COVID-19 in Finland using Oracle Cloud (9:29)

### Experience spatial capabilities in Oracle Autonomous Database

Easily load and create spatial data, and visualize it.
