- Lessons Learned
- Preview of Oracle Database 23c Free – Release
- Questions

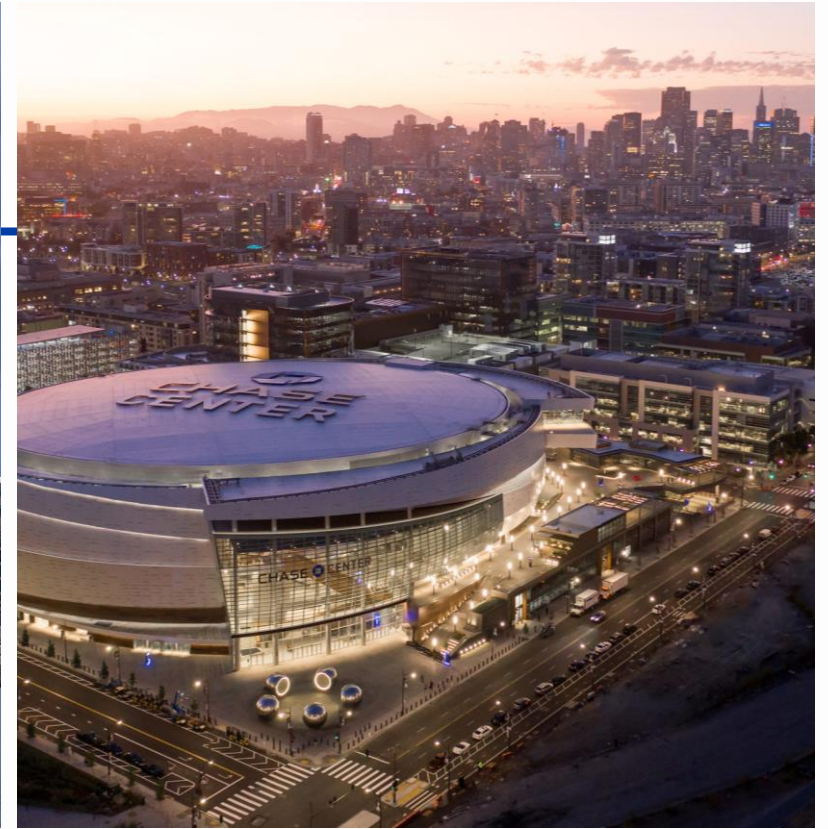

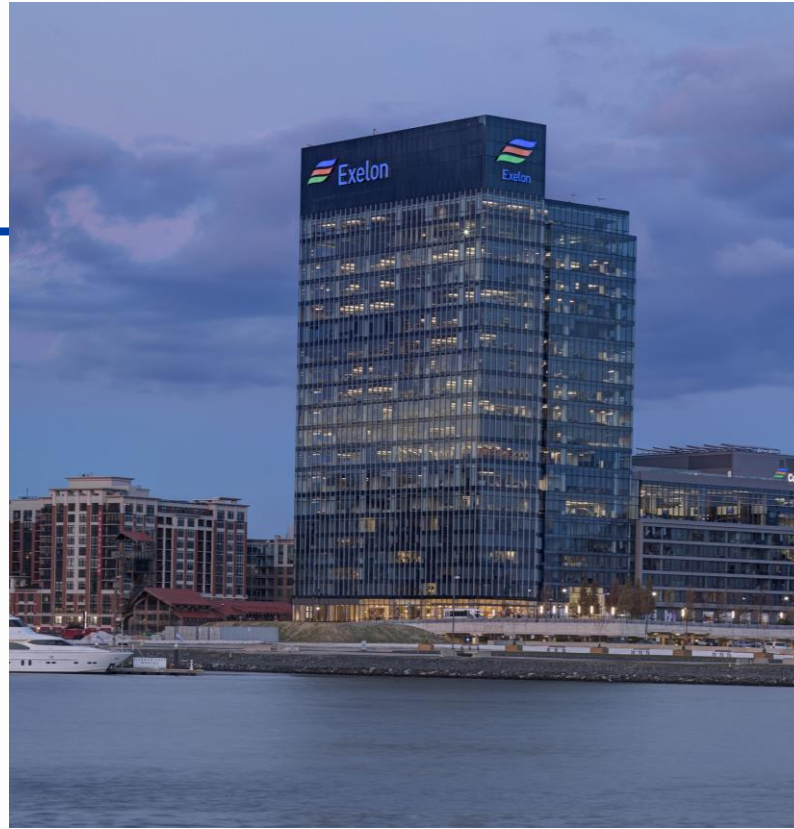

ABOUT ROSENDIN

Established in 1919, Rosendin remains proud of our **more than 100 years** of building quality **electrical and communications installations and value** for our clients but, most importantly, for **building people** within our company and our communities.

Our customers lead some of the most complex construction projects in history and rely on us for our knowledge, ability to scale, and dedication to quality.

At Rosendin, we work to ensure that **everyone has the opportunity** to reach their full potential by building a culture that is **diverse, safe, welcoming, and inclusive**.

- Over 7,500 Employees
- Annual Revenue \$3B+
- Offices Nationwide
- Employee-Owned

WHAT WE BUILD

 ROSENDIN

 ROSENDIN

COMMITTED.
CONNECTED.
ENGAGED.

OUR MISSION

Building Quality. | Building Value. | Building People.®

Our customers lead some of the most complex construction projects in history and rely on us for knowledge, scalability, and quality. They value our partnership because they deserve a team as committed, connected, and engaged as they are. As the largest employee-owned company in our industry, we do what is needed for a successful job.

OUR VISION

Lead. Inspire. Build.

We believe the work we do should build our industry, empower our employees and inspire innovation.

OUR CORE VALUES

- **We Care.** We are an organization built on integrity. We create an environment that empowers people to work safely, be at their best, and respect one another.
- **We Listen.** Our success is based on hearing and understanding the objectives of our customers. We build relationships.
- **We Share.** We collaborate, inspire, and challenge one another.
- **We Innovate.** People will remember us for the solutions we provide. Entrepreneurial ideas are encouraged to continuously raise industry standards.
- **We Excel.** The quality of our work will represent us for years to come. We take pride in what we build. It is our legacy.

BACKGROUND

- Large legacy OBIEE system
- Had “Dashboards”
- Migrated OBIEE 11.1.1.7 to OAC
- Tried rebuilding data structure to increase load performance etc.
- Brought in revolving door of people who said they knew OAC, but only knew OBIEE
- Realized needed help, especially with integrating visuals and reorganizing/optimizing our data structure.

MOTIVATIONS

- Retire outdated technology
 - physical servers reaching end of life
- Improved overall performance of the system
 - dimension tables
 - remodeling of subject areas
- Redesigned dashboards to make more useful and interactive
- Used ad hoc DV capabilities of OAC
 - explore business data
 - develop new analytic insights
- Working to remove manual reporting process to automated DV processes.

CURRENT TECHNOLOGY– CLOUD FIRST APPROACH

- We are on cloud-based technology
- ADW
 - Faster
 - Less maintenance
 - Retire old hardware
 - Modified data model at same time
 - Now on cloud
- ODI
 - started using ODI instead of Informatica
- OAC
 - Access to DV front end for new business cases
 - Better visualizations
- Not 100% autonomous – needs some looking after
- Dedicated resource that knows ADW is still helpful

ROSENDIN NEEDS IN OCTOBER 2020

- We wanted to modernize analytics
- Get business to use the data regularly (be more modern)
- End users had lost confidence in data integrity, frustrated with load times, stakeholders irritated with long development times
- Asked Oracle sales rep for suggestion

"Find me someone that can do what you promised, or we are done."

Matt Lamb, Rosendin CIO

WORKING WITH CONTRACTORS

- Started with support contract to help Rosendin with OAC
 - Punch list items – 7 quick-hit items to get going
- Rebuilt Billings Dashboard in OAC classic using OBIEE dashboards as a prototype
- Install Rate dashboard built in DV according to users' needs
 - Identified issue with monthly vs weekly data
- Assessment

FINDINGS FROM OAC ASSESSMENT

- Redesign Executive KPI and other dashboards
 - Several UI suggestions
 - New comparison measurements
 - Additional graphs for specific analyses
- Move calculations into RPD, not in report logic
- Organize column names to make more useable
- Performance needs to be improved

WHERE WE ARE TODAY

- Migrated to OAC
- ETL is now in ODI
- New ADW model
- Dashboards updated
- Starting to work with OAC DV

Turned off OBIEE 3/10/2023
Repurposed Servers June 2023

POST GO-LIVE – ROLLOUT INSTALL RATE DASHBOARD

POST GO-LIVE - PERFORMANCE

- Started working on Performance
 - Identified Candidates for Performance Improvements
 - Made Significant Performance Boost – CAST

Logical Table Source - Dim_W_PROJECT_D_Project

More...

Logical Dimension	Logical Level	
Project		✗

Fragmentation content:

☐ This source should be combined with other sources at this level

☐ Enable Data Driven Fragment Selection

Use this "WHERE clause" filter to limit rows returned (exclude the "WHERE"):

CAST("RDADW"."DW"."Dim_WC_PROJ_SEC_D"."USER_ID"
AS DOUBLE) = VALUEOF(NQ_SESSION."REIETL_USER_ID")

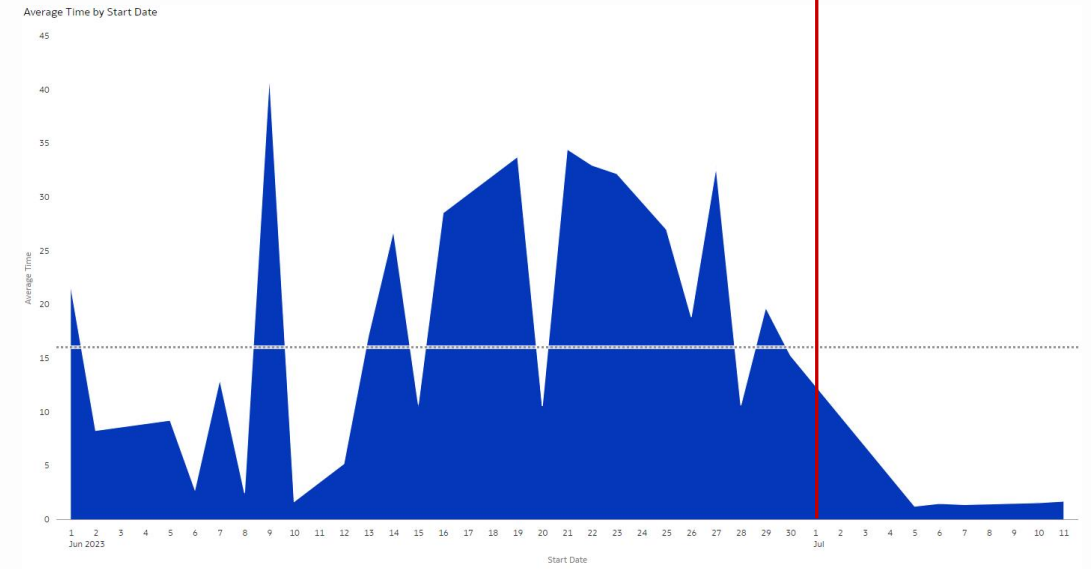

☐ Select distinct values

POST GO-LIVE – PERFORMANCE RESULTS

Poor Running Report

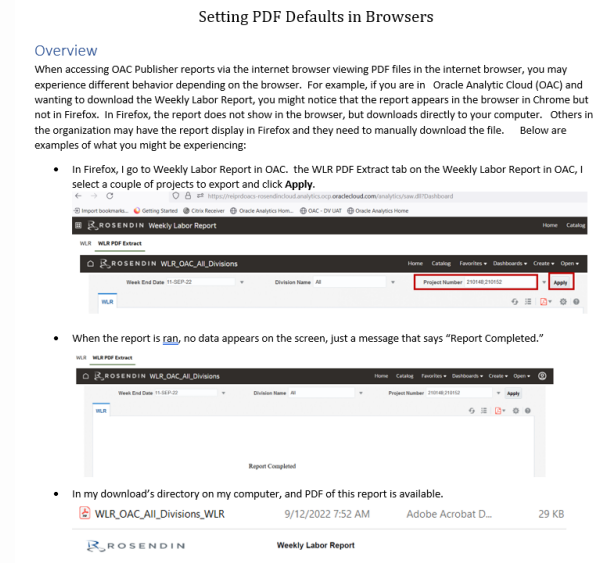

All Reports

POST GO-LIVE INITIATIVES (INCREASE ADOPTION)

- Increase adoption of Oracle Analytics
 - Provide support for user community
 - Tips and Tricks
 - Training
 - Quickly address questions and concerns

"I just ran my report and was able to pull about 40 jobs in about 12 seconds!"

Suzanne Dunn

POST GO-LIVE – EXPANDING USE OF OAC DV

- Worked with field on Labor Efficiency analysis
 - Built DV analytics to show inefficiency in labor
 - Team members working multiple locations in a single day
 - Team members working on multiple tasks in day
 - Team members remaining on project to keep consistency
 - Normally, pay \$25 – \$50K for outside firm for labor inefficiency analysis. This took 5 hours to complete.

POST GO-LIVE – POWER BI CONNECTOR

- Installed and tested Power BI Connector and worked with the analysts to build analyses in OAC and have them load and update Power BI model, cutting down the need for export/import.
- Things to know:
 - Only works with Power BI Desktop only (Not Premium or Pro)
 - The model is stored in BI Desktop
 - After built the user should be able to migrate to Premium or Pro
 - Connection to the OAC subject area (presentation layer of the RPD). Can access data via:
 - Tables in subject area (BIContentAuthor Role)
 - Analyses built in OAC (BI Consumer Role)
 - Logical SQL from advance table of analysis (??? Role)
 - Must have Oracle Analytics client tools installed on the desktop
 - May need to increase the "Access Token Timeout"

BENEFITS

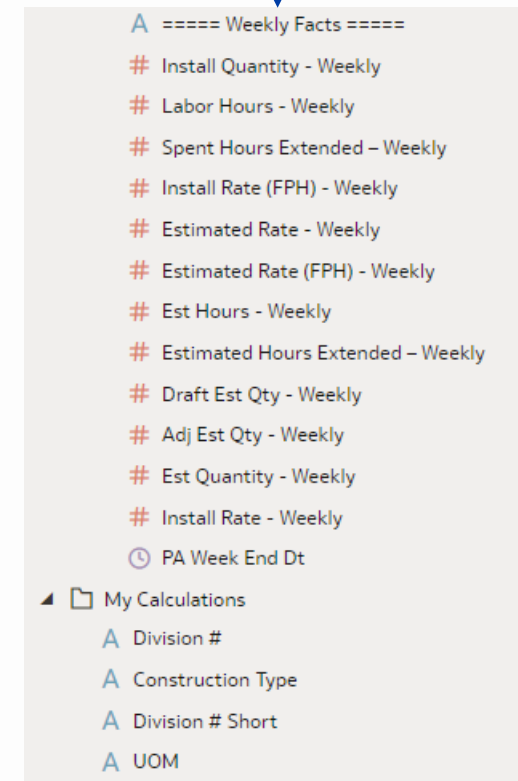

- Provided supervisors and managers access to on-demand weekly-level data
 - Enables them to properly staff their projects
- Business Improvements
 - Helped internal group be more confident about the data
 - Super users now able to use in ad-hoc manner
 - End users noticing improvement vs OBIEE – speed and usability
 - Have more confidence that IT can deliver results

DEMO

LESSONS LEARNED

- Not 100% autonomous – needs some looking after
 - Dedicated resource that knows ADW is still helpful
- Find good reasonable ODI resources
- Average user has trouble creating ad-hoc reports
 - Rosendin has complicated data model that's grown over the years
 - Users have preference to other analytic tools
- Meet early and often with key users
- Hire employees and contractors that fit with your culture
- Validate skill sets claimed
- Take advantage of the resources available to you
 - Global Leaders
 - Customer Advisory Board
 - Trusted Oracle Partners

40+ Measures

DATABASE 23C FREE

ORACLE DATABASE 23C - FREE

Overview

Oracle released Oracle 23c Free – Developers Release which is the first release of the next generation of the Oracle Database. Developers can download and start using the Oracle 23c Free release to get a head start on new features of the Oracle database. Oracle provides a VirtualBox download that includes:

- Oracle Linux 8.7
- Oracle Database 23.2 Free - Developer Release for Linux x86-64
 - Sample Schema and Tables
- Oracle REST Data Services 23.1
- Oracle SQLcl 23.1
- Oracle APEX 22.2

Limitations

- 12 GB of User Data storage
- Maximum RAM is 2 GB

Steps:

- Download Image - <https://www.oracle.com/database/free/download/>
- Install Virtual Box - <https://www.virtualbox.org/>
- Follow the instructions and you should be ready to go in less than an hour.

KEY FEATURES - DEVELOPERS

- [SQL/PGQL](#)
- [4096 Columns](#)
- [SQL*Plus ARGUMENT Command](#)
- [Aggregation over INTERVAL Datatypes](#)
- [Boolean Data Type](#)
- [Annotation](#)
- [IF \[NOT\] EXISTS Syntax Support](#)
- [Domains](#)
- [GROUP BY & HAVING with Column Aliases](#)
- [GROUP BY with Column Position](#)
- [SELECT Without FROM Clause](#)
- [Direct Joins for UPDATE and DELETE Statements](#)
- DEFAULT ON NULL for UPDATE or Insert Statements

4096 COLUMNS & SQL*PLUS ARG

- [4096 Columns](#) - Oracle increased the number of columns in a table from 1000 to 4096 columns. Quote below makes me a little apprehensive:

"There is a new feature in Oracle Database 23c allowing for up to 4096 columns in a table or view. However, only **23c clients can be used to access tables or views** that take advantage of this new feature."

- [SQL*Plus ARGUMENT Command](#) - A new ARGUMENT command lets users of batch scripts control how SQL*Plus treats script argument variables for which the users have not explicitly set values. With this command, users are now able to control when to prompt for input or use a default value for each unset script argument.

AGG OVER INTERVAL & BOOLEAN

- [Aggregation over INTERVAL Datatypes](#) - You can pass INTERVAL datatypes to the SUM and AVG aggregate and analytic functions. This enhancement makes it easier for developers to calculate totals and averages over INTERVAL values.
- [Boolean Data Type](#) – While Boolean data types have been in PS/SQL for year, Oracle 23c introduces the Boolean data type in SQL:
 - Define a boolean data type using the BOOLEAN or BOOL keywords
 - Assign a value to a Boolean type in several ways
(insert into boolean_test (active, archived) values (true, false))
 - true/false, TRUE/FALSE, t/f, T/F
 - yes/no, YES/NO, y/n, Y/N
 - on/off, ON/OFF
 - 1/0, '1'/'0'

ANNOTATION AND IF [NOT] EXISTS

- [Annotation](#) - Annotations allow us to add a description or purpose to a table. Used for documentation. Populates the user_annotation_usage table.
- [IF \[NOT\] EXISTS Syntax Support](#) - DDL object creation, modification, and deletion now support the IF EXISTS and IF NOT EXISTS syntax modifiers. This enables you to control whether an error should be raised if a given object exists or does not exist.

The IF [NOT] EXISTS syntax can simplify error handling in scripts and by applications.

DOMAINS

- [Domains](#)– Domains will let us have a Single Point of Definition (SPOD) for columns. This will allow consistency through the application. Below is an example in the documentation using email address:

Creating Domain

```
create domain email_dom as varchar2(100)
constraint email_chk check (regexp_like (email_dom, '^(\\S+)\\@(\\S+)\\. (\\S+)$'))
display lower(email_dom)
order lower(email_dom)
annotations (Description 'Domain for Emails');
```

Referencing Domain

```
create table t1 (
  id      number,
  email   email_dom
);
```

GROUP BY & HAVING WITH COLUMN ALIASES

- GROUP BY and HAVING clause can now use column aliases.

```
1 Select
2 a.DEPARTMENT_ID || ' - ' || b.DEPARTMENT_NAME as DEPT,
3 count(a.EMPLOYEE_ID) as EMP_COUNT
4 from EMPLOYEES a,
5      DEPARTMENTS b
6 where a.DEPARTMENT_ID = B.DEPARTMENT_ID
7 group by DEPT;
```

Query Result Script Output DBMS Output Explain Plan

Download Execution time: 0.006 seconds

	DEPT	EMP_COUNT
1	10 - Administration	1
2	20 - Marketing	2
3	30 - Purchasing	6
4	40 - Human Resouir	1
5	50 - Shipping	45
6	60 - IT	5
7	70 - Public Relator	1
8	80 - Sales	34
9	90 - Executive	3
10	100 - Finance	6
11	110 - Accounting	2

```
1 Select
2 a.DEPARTMENT_ID || ' - ' || b.DEPARTMENT_NAME as DEPT,
3 count(a.EMPLOYEE_ID) as EMP_COUNT
4 from EMPLOYEES a,
5      DEPARTMENTS b
6 where a.DEPARTMENT_ID = B.DEPARTMENT_ID
7 group by DEPT
8 having EMP_COUNT > 5;
```

Query Result Script Output DBMS Output Explain Plan

Download Execution time: 0.021 seconds

	DEPT	EMP_COUNT
1	30 - Purchasing	6
2	50 - Shipping	45
3	80 - Sales	34
4	100 - Finance	6

GROUP BY WITH COLUMN POSITION - FAILED

- GROUP BY clause can now use column aliases.

 1 Select
2 a.DEPARTMENT_ID || ' - ' || b.DEPARTMENT_NAME as DEPT,
3 count(a.EMPLOYEE_ID) as EMP_COUNT
4 from EMPLOYEES a,
5 DEPARTMENTS b
6 where a.DEPARTMENT_ID = b.DEPARTMENT_ID
7 group by 1
8 having EMP_COUNT > 5;

Query Result Script Output DBMS Output Explain Plan

   Download ▾

00979. 00000 - "not a GROUP BY expression"

*Cause:

*Action:

Error at Line: 2 Column: 0

But Oracle said it works????

In this example, rather than repeating the "initcap(d.dname)" reference in the GROUP BY clause, we use the column position of "1". We are not able to use the column position in the HAVING clause for obvious reasons, as the database wouldn't know what was a column position and what was a number literal.

```
select initcap(d.dname) as department, count(*) as amount
from dept d
join emp e on d.deptno = e.deptno
group by 1
having amount > 3;
```

DEPARTMENT	AMOUNT
Research	5
Sales	6

GROUP BY WITH COLUMN POSITION - SUCCESS

The Solution : Column Position

From Oracle 23c onward we can make use of the column position in the GROUP BY clause. This functionality is not enabled by default, so it must be enabled at the session or system level. Here we enable it for our session.

```
alter session set group_by_position_enabled=true;
```

```
1 alter session set group_by_position_enabled=true;
2 select
3   a.DEPARTMENT_ID || ' - ' || b.DEPARTMENT_NAME as DEPT,
4   count(a.EMPLOYEE_ID) as EMP_COUNT
5 from EMPLOYEES a,
6       DEPARTMENTS b
7 where a.DEPARTMENT_ID = b.DEPARTMENT_ID
8 group by 1
9 having EMP_COUNT > 5;
```

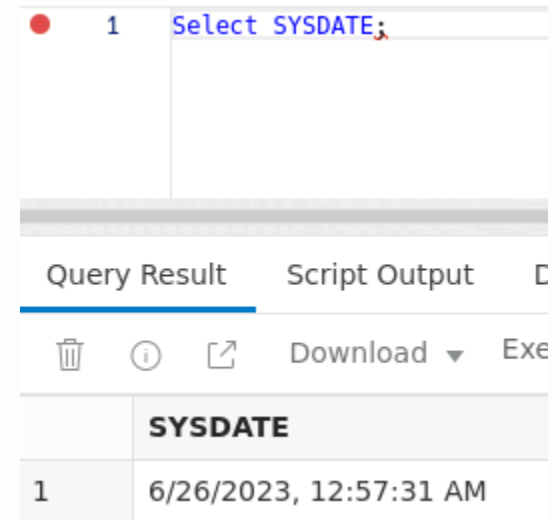

Query Result Script Output DBMS Output Explain Plan

Download ▾ Execution time: 0.027 seconds

	DEPT	EMP_COUNT
1	30 - Purchasing	6
2	50 - Shipping	45
3	80 - Sales	34
4	100 - Finance	6

SELECT WITHOUT FROM CLAUSE

- [SELECT Without FROM Clause](#) - You can now run SELECT expression-only queries without a FROM clause

The screenshot shows a SQL query editor with a single query: `Select SYSDATE;`. The query is highlighted in blue. Below the query editor, there are tabs for 'Query Result' and 'Script Output'. The 'Query Result' tab is active, showing a table with one column named 'SYSDATE' and one row containing the value '6/26/2023, 12:57:31 AM'. A red dot and a squiggly line are visible at the end of the query, indicating a syntax error.

	SYSDATE
1	6/26/2023, 12:57:31 AM

If I put “;” at the end, I got the red dot and squiggly line indicating incorrect code, but it ran fine.

DIRECT JOINS FOR UPDATE AND DELETE STATEMENTS

- [Direct Joins for UPDATE and DELETE Statements](#) - Join the target table in UPDATE and DELETE statements to other tables using the FROM clause. These other tables can limit the rows changed or be the source of new values.

EMPLOYEES Table

```
1 Select
2 EMPLOYEE_ID,
3 FIRST_NAME,
4 LAST_NAME,
5 DEPARTMENT_ID,
6 DEPARTMENT_NAME
7 from EMPLOYEES;
```

	EMPLOYEE_ID	FIRST_NAME	LAST_NAME	DEPARTMENT_ID	DEPARTMENT_NAME
1	100	Steven	King	90	(null)
2	101	Neena	Kochhar	90	(null)
3	102	Lex	De Haan	90	(null)
4	103	Alexander	Hunold	60	(null)

6	105	David	Austin	60	(null)
7	106	Valli	Pataballa	60	(null)
8	107	Diana	Lorentz	60	(null)
9	108	Nancy	Greenberg	100	(null)

DEPARTMENTS Table

```
1 Select *
2 from DEPARTMENTS;
```

	DEPARTMENT_ID	DEPARTMENT_NAME	MANAGER_ID	LOCATION_ID
1	10	Administration	200	1700
2	20	Marketing	201	1800
3	30	Purchasing	114	1700
4	40	Human Resources	203	2400
5	50	Shipping	121	1500
6	60	IT	103	1400
7	70	Public Relations	204	2700
8	80	Sales	145	2500
9	90	Executive	100	1700

DIRECT JOINS FOR UPDATE AND DELETE STATEMENTS

```
1 update EMPLOYEES a
2 set   a.department_name = b.department_name
3 from   DEPARTMENTS b
4 where  a.department_id = b.department_id;
5
6 Select
7 EMPLOYEE_ID,
8 FIRST_NAME,
9 LAST_NAME,
10 DEPARTMENT_ID,
11 DEPARTMENT_NAME
12 from EMPLOYEES;
```

```
update EMPLOYEES a
set   a.department_name = b.department_name
from   DEPARTMENTS b
where  a.department_id = b.department_id;
```
